REQUIREMENTS ANALYSIS

2

Framework's and Languages

List of Technologies Used:

HTML

HTML makes up the layout and structure of your website. This language is dynamic and allows you to create a beautiful website using less code

HTML

CSS

CSS is the language developers can use to style a website. The style sheet language describes how your website is presented and its layout.

JavaScript

JavaScript is used in many aspects of web development. Web developers use this language to add interactive elements to their websites

JS

SQL

SQL is a database query language that is used when your website is computing large amounts of data.
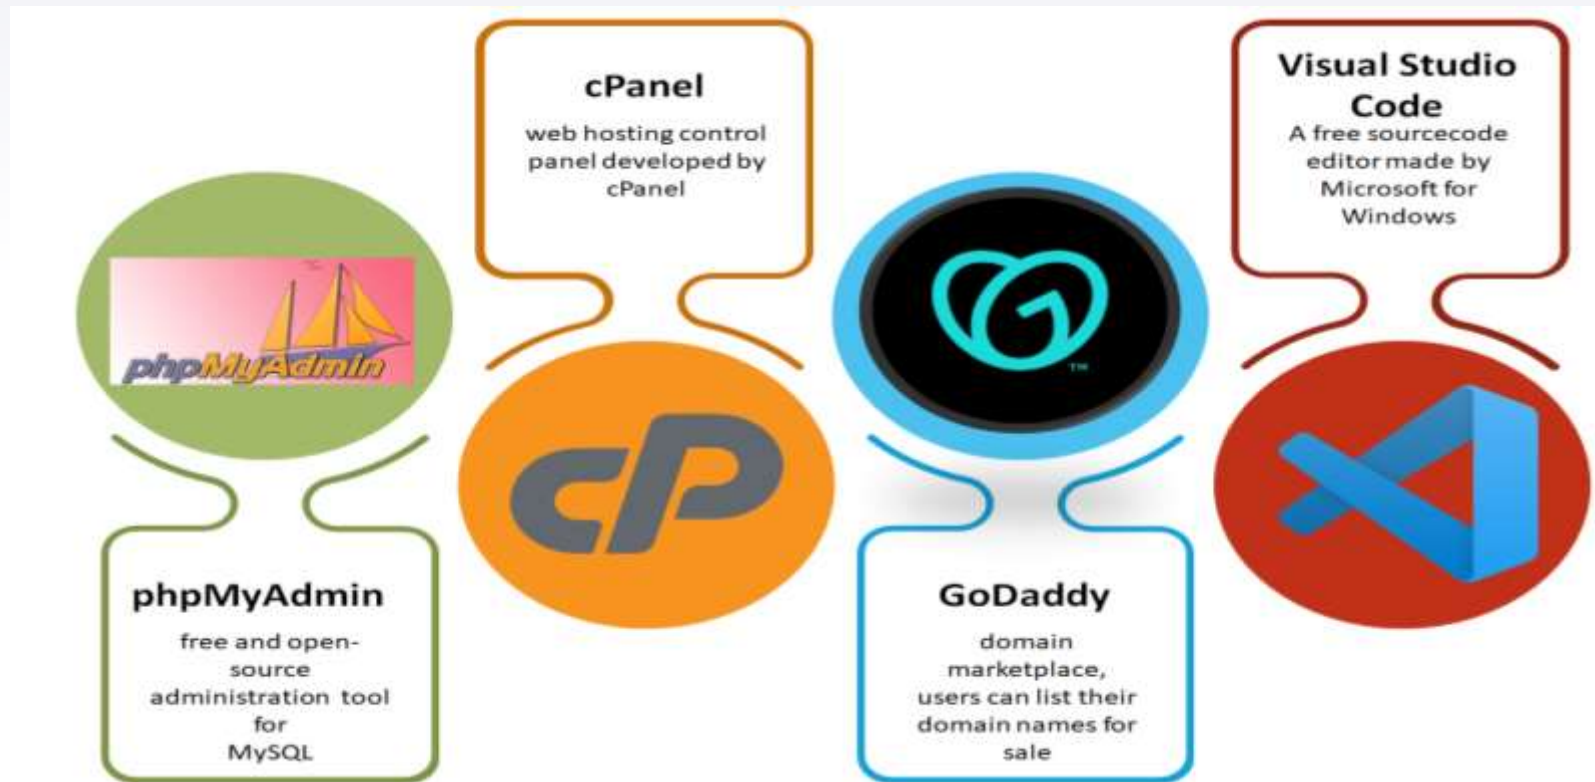

PHP

PHP is often used on data heavy websites or for app Development. This is an open-source language that can be easily modified to meet the needs of your business or website.
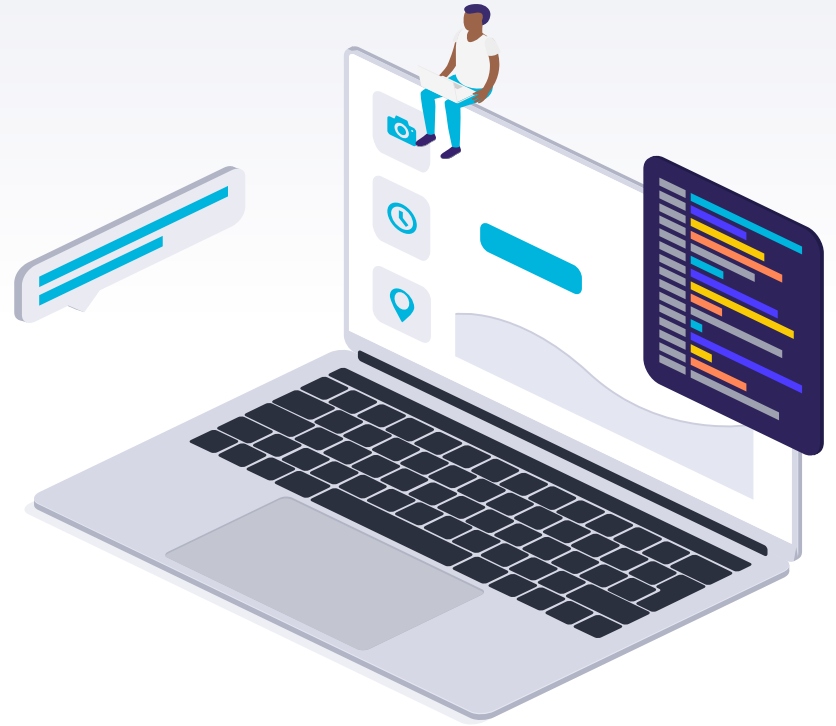

Tools Used :

cPanel
web hosting control panel developed by cPanel

Visual Studio Code
A free sourcecode editor made by Microsoft for Windows

phpMyAdmin
free and open-source administration tool for MySQL

GoDaddy
domain marketplace, users can list their domain names for sale

3 DESIGN

System Modal of the Application
